# CONTENTS

**I. INTRODUCTION** **1**

**I.1.** Physics in the evolution of medicine - examples ……..…… **1**
**I.2.** What is Biophysics? Biophysics evolution ……... **2**
**I.3.** Biophysics – borderline science …… **5**
**I.4.** Classification of Biophysics domains ……... **5**
**I.5.** Medical biophysics: three directions of evolution ……..……..…… **7**

**II. THE THEORY OF SYSTEMS IN BIOLOGY AND MEDICINE** **11**

**II.1.** The meaning and delimitation of the system notion …… **11**
**II.2**. Systems classification ..…….…. **12**
**II.3**. Main general features of the biological systems …….. **14**
**II.4.** Conditions and ways of approaching the systems for their study ……... **15**
**II.5.** Biological thermodynamics ……. **16**
**II.6.** Cybernetics and biocybernetics …….. **20**
**II.7**. Complex systems ……. **21**
**II.8**. Complexity and chaos in biosystems ……... **24**
**II.9**. What is life? ……. **25**

**III. MODEL SYSTEMS: MODELING IN SCIENTIFICAL RESEARCH AND MEDICAL PRACTICE** **28**

**III.1.** Scientifical model, modeling – definitions, trends in medicine ……. **28**
**III.2.** The modeling stages: Hodgkin – Huxley modeling of the nervous influx transmission in a nerve axon …….. **29**
**III.3**. Models classification …….. **31**
**III.4.** Theoretical modeling, structural modeling, functional modeling ……...…. **32**
**III.5.** *In silico* modeling. Virtual cell ……..…… **36**
**III.6.** Biosensors …….. **37**
**III.7**. Trends in prosthetic modeling …… **42**
**III.8**. Biomaterials and biocompatibility ……. **46**
**III.9**. Biological models …….. **48**
**III.10.** Nanotechnology, nanobiophysics, nanomedicine …… **53**

**IV. PHYSICAL AND BIOPHYSICAL METHODS AND TECHNIQUES IN MEDICINE** **65**

**IV.1.** General and instrumental methods: classification, general characteristics …….. **66**
**IV.2.** Electrophoretic techniques …… **68**
**IV.2.1.** Physical principle of electrophoretic techniques ……. **68**
**IV.2.2.** Polyacrylamide electrophoresis (PAGE) ……. **75**
**IV.2.3.** SDS-PAGE ……. **76**
**IV.2.4.** Capillary electrophoresis (CE) …… **78**
**IV.2.5.** Isoelectric foccussing …….. **79**
**IV.2.6.** Immunoelectrophoresis ……... **83**
**IV.3.** Chromatographic techniques …… **85**
**IV.3.1**. Principle of the method. Chromatography types ……..……... **85**
**IV.3.2.** Affinity chromatography …… **88**
**IV.4.** Centrifugation techniques ……. **91**
**IV.4.1**. Principle of the method ……... **91**
**IV.4.2.** Classification of centrifugation techniques ……. **94**
**IV.5.** Liophylisation …….. **99**
**IV.6.** Important steps in the separation of a subcellular sample ……... **102**
**IV.7.** Kinetic methods …… **105**
**IV.7.1.** Osmotic pressure measurement: direct and indirect methods ……... **105**
**IV.7.2.** Biological liquids viscosity coefficient measurement methods …… **107**
**IV.7.3.** Biological liquids surface tension coefficient measurement methods ……. **108**
**IV.8.** Optical microscopy ……... **110**
**IV.9.** Electron microscopy ……. **126**
**IV.9.1.** The physical principle of electron microscopy ……..... **126**
**IV.9.2.** The interaction between an electron beam and the specimen ……. **129**
**IV.9.3.** Main parts of the electron microscope ……..... **132**
**IV.9.4.** Transmission electron microscopy ……..….. **136**
**IV.9.5.** Scanning electron microscopy ……..... **137**
**IV.9.6.** Freeze-etching and combined electron microscopy techniques ……..…... **139**
**IV.10.** X-ray diffraction ……..... **147**
**IV.11.** Spectroscopic techniques ……. **153**
**IV.11.1.** Principle and classification of spectroscopic techniques ……... **153**
**IV.11.2.** Electron transition spectra …….. **156**
**IV.11.3.** Microwaves spectrometry - rotation spectra …….. **160**
**IV.11.4.** Infrared and Raman spectrometry (vibration - rotation spectra) ……...… **161**
**IV.11.5.** Nuclear magnetic resonance spectroscopy ….…….. **162**

**V. BIOPHYSICAL ASPECTS OF MACROMOLECULES** **165**

**V.1.** Macromolecules: general characteristics in biosystems …….. **165**
**V.2.** Biophysical characteristics of protein structure ……... **167**
**V.3.** Biophysical aspects of nucleic acids …… **176**

**VI. BIOPHYSICS OF WATER** **182**

**VI.1**. Water molecule ……... **182**
**VI.2**. The structure of water: ice and liquid water ……..…… **183**
**VI.3**. Dissociation of water …… **185**
**VI.4.** Properties of water and their particularities ……... **186**
**VI.5.** Water distribution in living tissues ……..…… **190**

**VII. BIOMEMBRANE BIOPHYSICS** **191**

**VII.1.** Biomembranes: definition, types, essential roles …….. **193**
**VII.2.** Biomembrane composition and molecules biophysics characteristics ……. **195**
**VII.2.1.** Membranar phospholipids …….. **196**
**VII.2.1.1**. General composition; biophysical properties ……. **196**
**VII.2.1.2.** Lipid organization: the lipid bilayer concept …….. **198**
**VII.2.1.3.** Membranar fluidity (microviscosity) …….. **200**
**VII.2.2**. Membranar proteins …….. **203**
**VII.2.2.1.** General composition; biophysical properties ……. **203**
**VII.2.2.2.** Protein organization: disposition in the lipid bilayer …….. **203**
**VII.3.** Models and methods for the study of biomembranes. …….. **207**
**VII.4.** Cell membranes supramolecular architecture ……... **211**
**VII.4.1.** Biophysical models evolution …… **211**
**VII.4.2.** The ‘fluid mosaic’ model ……... **214**
**VII.5.** Biomembranes transport biophysics ……. **217**
**VII.5.1.** Membrane classification from their permeability point of view …… **217**
**VII.5.2.** Membrane transport processes classification and diagrammatic presentation... **219**
**VII.5.3.** Passive transport ……. **221**
**VII.5.3.1.** Simple diffusion. Fick’s laws ……. **221**
**VII.5.3.2.** Simple diffusion through ionic channels …… **224**
**VII.5.3.2.1.** Ionophors ……... **224**
**VII.5.3.2.2.** Patch-clamp method for the study of ion channels ……... **225**
**VII.5.3.2.3.** Most important ion channels characteristics ……. **228**
**VII.5.3.3.** Osmosis: molecular mechanism basis ……... **242**
**VII.5.3.4.** Donnan equilibrium ……... **246**
**VII.5.3.5.** Facilitated diffusion: membranar carriers ……. **247**
**VII.5.4.** Active transport …….. **249**
**VII.5.4.1.** $Na^+/K^+$, $H^+/K^+$ and $Ca^{2+}$ pumps ……. **249**
**VII.5.4.2.** Secondary active transport …… **254**
**VII.5.4.3.** Group translocation …….. **256**
**VII.6.** Intercellular communication theory …….. **257**
**VII.6.1.** The component parts of an intercellular communication system ……. **257**
**VII.6.2.** Presentation of the major possibilities of information transmission …… **259**
**VII.6.3.** Classification and general characteristics of cellular receptors ……... **260**

**VII.6.4.** Membrane receptors …… **261**
**VII.6.4.1.** General molecular structure of membrane receptors ……... **262**
**VII.6.4.2.** General functional characteristics of membrane receptors …….. **263**
**VII.6.4.3.** Classification of membrane receptors ……. **264**
**VII.6.4.4.** G-protein associated receptors ……. **265**
**VII.6.4.5.** Receptors associated with second messengers ……... **269**
**VII.6.4.6.** Receptors with protein kinase activity ……. **273**
**VII.6.4.7.** Ionic channels associated receptors ……. **275**
**VII.6.4.8.** Ligand delivering receptors ……. **276**
**VII.6.5.** Intracellular receptors ……. **277**

**VIII. BIOPHYSICAL BASIS OF BIOELECTRICITY** **280**

**VIII.1.** Resting biopotential mechanisms ……. **280**
**VIII.2.** Action biopotential biophysics …….. **282**
**VIII.3.** Muscular bioelectric phenomena …….. **286**

**IX. BLOOD FLOW BIOPHYSICAL ELEMENTS** **289**

**IX.1.** Blood flow: Newtonian, nonNewtonian, laminar and turbulent flow …… **289**
**IX.2.** Blood viscosity ……... **291**
**IX.3.** Blood pressure and elasticity of vascular wall influence ……... **293**

**X. RESPIRATION BIOPHYSICAL ELEMENTS** **295**

**X.1.** Pulmonary ventilation physical factors and elasticity physical factors …….. **295**
**X.3.** Pulmonary surfactant biophysics …… **297**

**XI. BIOPHYSICS OF THE SENSORY SYSTEM** **299**

**XI.1.** Physical signals and sensorial messages ……... **299**
**XI.2**. Hearing reception biophysics ‘…… **300**
**XI.3.** Visual reception biophysical mechanisms …… **301**
**XI.4.** Olfactive reception and taste …….. **303**
**XI.5.** Psychophysics: Weber-Fechner law ……... **304**

**XII. RADIOBIOLOGY ELEMENTS** **306**

**XII.1.** Radioactivity physical basis …… **306**
**XII.2.** Biological effects of ionizing radiation ……... **312**
**XII.3.** Ionizing radiation detection …… **314**
**XII.4.** Dosimetry and radioprotection; characteristic measure units …… **315**
**XII.5.** Radioisotopes applications in biology and medicine …….. **318**

**XIII. PHYSICAL AND BIOPHYSICAL BASIS OF MEDICAL IMAGISTICS 320**

**XIII.1**. The classification of medical imagistic from the physical point of view …….. **320**
**XIII.2.** The scintigraphic method: physical principle …… **321**
**XIII.3.** Ultrasounds in medicine: US production, detection and their medical applications …. **327**
**XIII.4.** X rays in medicine: the physical basis of X-ray imaging techniques ……. **332**

**XIV. THE EFFECTS OF SOME PHYSICAL FACTORS UPON BIOSYSTEMS 336**

**XIV.1.** Acceleration effects on the organism …….. **336**
**XIV.2.** Laser – principles and applications …… **338**
**XIV.3.** Biological effects of non-ionizing radiations ……. **341**
**XIV.4.** Ultrasounds biological effects and their use in therapy …….. **346**
**XIV.5.** Temperature effects on living organisms …… **348**
**XIV.6.** Pressure variation effects on diving ……... **350**

**REFERENCES** …….. **351**
